CV / 2026 · VALENCIA, SPAIN (REMOTE) · AVAILABLE FOR SENIOR FULL-STACK ROLES

Oliver Kaikane Gate

Senior full-stack developer with seven years building production software. I work mostly in React and TypeScript, with Python and Node.js behind the UI. I owned the main analytics dashboard at OpenSC and led a five-person frontend team at Redington.

01 Experience

Senior Full Stack Developer · OpenSC

JUL 2022 – APR 2026

Supply-chain traceability venture co-founded by WWF and BCG. Built tools for Nespresso, Austral Fisheries and internal teams to investigate sourcing, provenance and farmer payments.

- Owned the main analytics dashboard as its sole engineer, from implementation through maintenance: Python and Plotly Dash for analysis, with React and Next.js for consumer-facing pages.
- Built traceability and payment validation used by Nespresso to check coffee sourcing and farmer payments against Rainforest Alliance and AAA programme requirements.
- Modelled supply-chain relationships so untraced coffee, capacity breaches and unexpected stock movements could be investigated through graph queries rather than individual supply-chain spot checks.
- Worked with Austral Fisheries to validate the legal provenance of toothfish and prawn catches.
- Replaced bespoke Dagster orchestration with a YAML-configured ingestion layer and data contracts, allowing new supply chains to be added through configuration.
- Built data-entry validation and review flows at the point of capture, supported by monitoring of ingestion accuracy and frequency.

STACK / React, Next.js, TypeScript, Python, Plotly Dash, Dagster, Kuzu, PostgreSQL, AWS

Associate Full Stack Developer · Redington

FEB 2019 – JUN 2022

UK pensions consultancy. Built the frontend of a multi-tenant investment research platform used by several thousand consultants across seven tenants.

- Led frontend architecture decisions for a React and TypeScript dashboard handling sensitive financial data across multiple tenants, with tenant isolation as a core constraint.
- Joined as a junior developer and progressed within two years to leading a five-person frontend team responsible for feature delivery.
- Introduced Cypress end-to-end testing across the platform to automate release checks and reduce manual release errors.
- Led a pro bono discovery workshop for a charity, then migrated its database and supporting infrastructure to Airtable.

STACK / React, TypeScript, MUI, Cypress, Jest, C# / .NET, PostgreSQL, AWS

TeacherHub

olivergate.com/projects/teacherhub

React, Next.js, TypeScript, Mantine, Supabase, OpenAI, Anthropic, Vitest

My Spanish teacher and I used a shared Google Doc for lessons. I built TeacherHub to keep notes, homework and progress together. Tests found lost vocabulary and exercises where the wrong answer matched the correction. I adjusted the scoring so a fair summary could pass and missing content would still fail.

OWASP Top 10 Trainer

olivergate.com/projects/owasp-trainer

React + TypeScript + Vite, Web Worker + Pyodide sandboxes, Vercel Functions, Upstash Redis, Resend

Read about a security bug, take the quiz and fix the code. The OWASP web and LLM tracks both run exploit tests in your browser so you can see whether your fix holds.
